## **Course Objectives**

1. "Oral Sedation" by Michael Haddow, DDS, MSD
  - Assess and manage patients prior to and during conscious oral sedation delivery.
  - Understand concepts of various oral conscious sedation techniques.
  - Gain a working knowledge of pharmacology of oral conscious sedation and related agents.
  - Expand your knowledge- Gain current medical information and become a better clinician.
  - Reach a broader base-Learn oral sedation to help the millions who fear dentistry by managing their pain and anxiety.
2. "Emergency Preparedness" by Roksolana Gala, DDS, MS
  - Discuss strategy for prevention of medical emergencies including appropriate patient evaluation and office/staff preparedness.
  - Demonstrate proper use of equipment and devices for respiratory and cardiovascular support.
  - Explain the components of a complete primary assessment.
  - Explain the actions, effects, indication and doses for useful emergency drugs and demonstrate their preparation and administration.
  - Describe the pathogenesis and appropriate protocols for managing medical complications that may present during dental treatment.
